AMENDED

APPLICATION FOR PERMIT TO APPROPRIATE THE PUBLIC WATERS OF THE STATE OF NEVADA

Date of filing in State Engineer's Office	001 4 5 1991
Returned to applicant for correction	
Corrected application filed	
Map filed	NOV 27 1991 under 56831
The applicantNewmont Gold	d Company by its agent. Charles Zimmerman
	•
	, hereby makes application for permission to appropriate the public r stated. (If applicant is a corporation, give date and place of incorporation; if a
·	of members.) Incorporated May. 1986.
Incorporated in Delaw	are. USA.
1. The source of the proposed appropriat operations, as specified up the proposed point of dive	tion is underground, within Gold Quarry pit dewatering nder Name of stream, lake, spring, underground or other source rsion (5.), from one or more production wells.
2. The amount of water applied for is5	.00 (2244.15 gpm; 3622.32 Acre Ft/Yr; 1180.3 Mg&dond-feet One second-foot equals 448.83 gals. per min.
(a) If stared in reservoir give number	of acre-feet 6000 Acre Ft (1,955,100,000 gallons) milling, irrigation, infiltration, surface discharge,
. damaatia	and/or dewatering Irrigation, power, mining, manufacturing, domestic, or other use, Must limit to one use,
4. If use is for:	
(a) Irrigation, state number of acres to	be irrigated
(b) Stockwater, state number and kind	s of animals to be watered
(c) Other use (describe fully under "N	No. 12: Remarks'') See 3. above
(d) Power:	
(1) Horsepower developed	
(2) Point of return of water to stre	am
5. The water is to be diverted from its so	ource at the following point <u>Within the NE quarter of section</u> Describe as being within a 40-acre subdivision of public
35, T34N, R51E, M.D.B.&M., survey, and by course and distance to a section corner	at a point from which the NE corner of section 36, T34N, If on unsurveyed land, it should be set stated.
	brass cap, bears N78° 43'E, a distance of 6,708 feet.
6. Place of use sections 21,22,2	3,24,25,26,27,28,33,34,35, and 36 of T34N, R51E, M.D.B.&Mescribe by legal subdivision. If on unsurveyed land, it should be so stated.
	,32,33,and 34 of T34N, R52E, M.D.B.&M. sections 1,2,3,4,
17,18,19,20,21,22,27,28,29 and 35 lying within the na of sections 33 and 34 lyin	of T33N, R51E, M.D.B.&M. sections 3,4,5,6,7,8,9,10,15,16,30,31,32, that portion of sections 2,11,14,23,26,34, tural drainage basin of Maggie Creek, and that portion g within the natural drainage basin of Mary's Creek of
7. Use will begin about January Month and I	1 and end about <u>December 31</u> , of each year. Month and Day
	er the provisions of NRS 535.010 you may be required to submit plans and
specifications of your diversion or sto	rage works.) Multiple dewatering wells equipped with pumps. State manner in which water is to be diverted, i.e. diversion structure, diches and
motors, totalizing flownet	ers, and pipelines to the place of use.
	two million dollars (\$32,000,000.00)

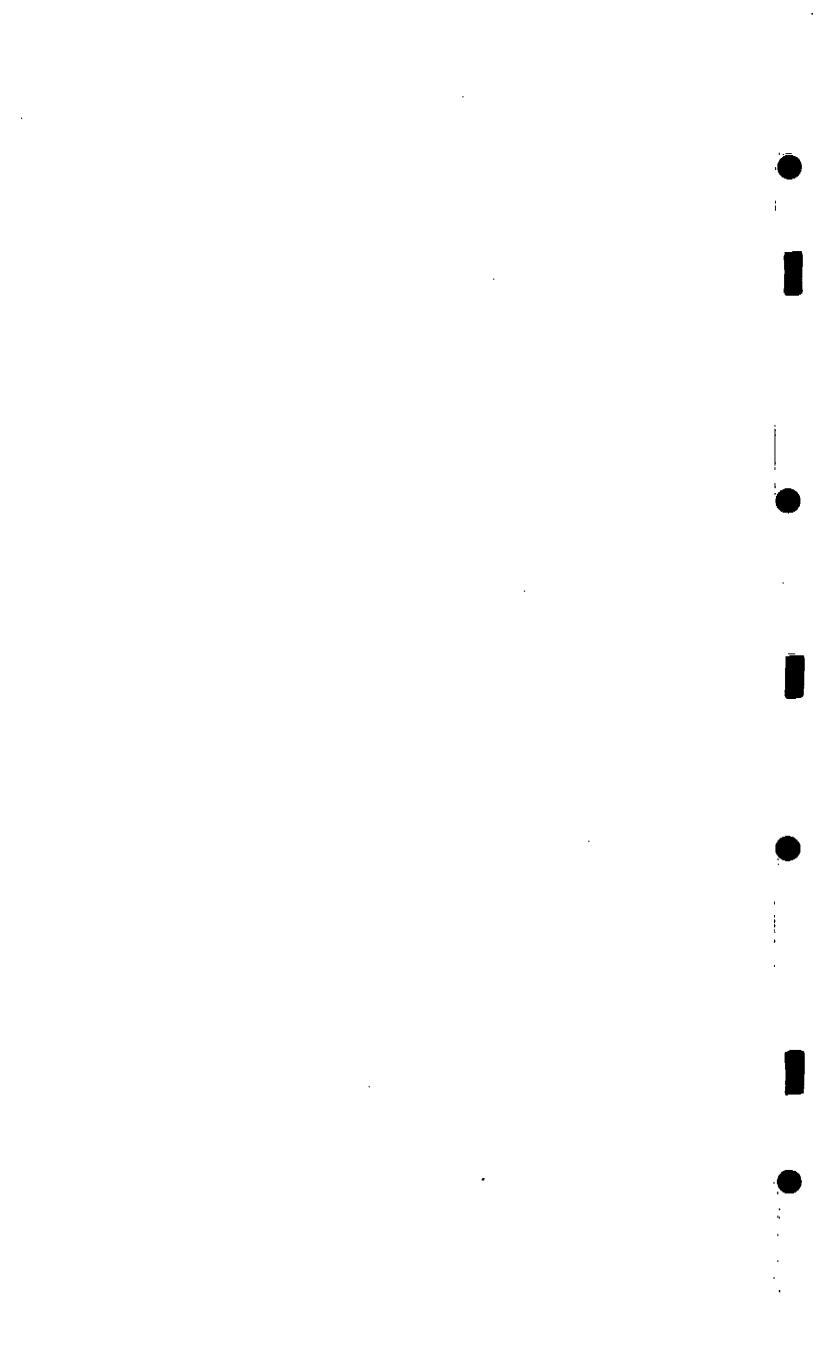

10. Estimated time required to construct works	Years If well completed, describe works,
11. Estimated time required to complete the application of water	r to beneficial use twelve years
 Remarks: For use other than irrigation or stock watering, consumptive use. 	state number and type of units to be served or annual
This application is hereby submitted for a	permit for water rights to dewater Newmont
allows for the appropriation of water from within a specified quarter section for mine	understood that approving an application State Engineer similar to Order 1038, which unspecified, multiple points of diversion dewatering purposes. The amount of water udies of future mine dewatering requirements

(PERMIT TERMS CONTINUED)

This permit is issued subject to the provisions of the State Engineer Order No. 1055 dated April 1, 1992, concerning rules for well spacing and modification of well drilling regulations in Maggie Creek Groundwater Basin.

Any water obtained under Permits 53384, 53385, 54339, 54340, 54341, 55616, 55617, 55618, 55619, and 56831 through 56839, inclusive, as a result of the dewatering program by the permittee shall be used first for the beneficial uses of mining, milling, heap leaching, drilling, construction, dust suppression and other related mining and milling uses within the place of use as described, hereinafter referred to as mining and milling purposes.

Water not used for the aforementioned purposes must be used for mitigating any impacts to existing groundwater or surface water right holders. Before any water can be utilized for mitigation purposes, the permittee must apply for and receive from the State Engineer any approval necessary.

The State Engineer may require injection of excess water, or substitution for other permitted groundwater uses as other possible mitigation measures.

Water may be placed in the Maggie Creek Reservoir (approved on July 21, 1992 under Dam Safety Permit J-387) and upon receipt of the necessary permits from the Nevada Division of Environmental Protection, may discharge water to various Humboldt River drainage systems. The use of this water shall be subject to the Humboldt River Decree.

Any approval granted by the State Engineer for irrigation purposes using water under these permits shall be within the irrigation season as specified in the Humboldt River Decree. Any water used on lands not previously under irrigation or having irrigation water rights must be substituted by foregoing irrigation on an equal number of acres and acre-feet under Proof No. 00171 of the Edwards' Decree of the Humboldt River Adjudication. The substitution shall be based on actual water used for the additional acreage and offset by actual allocations from the Humboldt River. Any schedule of irrigation shall be submitted to the Division of Water Resources' Supervising Water Commissioner prior to the actual irrigation of that land. The Supervising Water Commissioner will then set what lands and priorities will not be served under Claim No. 00171 of the Edwards' Decree.

Any other impacts caused on the Humboldt River system by this dewatering must be mitigated in a manner approved by the State Engineer.

A monthly report shall be submitted to the State Engineer within 10 days from the end of each month which shall include the amount of water pumped from each well; the amount used for mining and milling purposes; the amount diverted to the reservoir; the amount discharged to any surface drainage and which drainages; the amount injected back to the groundwater with the location of the well and the depth to where water is injected; and the amount of water used for any other purpose allowed under these permits. All groundwater and surface water monitoring data shall be submitted to the State Engineer on the same basis as specified in Appendix "A" - Mitigation Plan of the Final Environmental Impact Statement, Newmont Gold Company's South Operations Area Project (November 1993).

The total combined duty of water under Permits 40900, Certificate 13392, 47962, 48328, 48330, 48910, 48911, 48912, 49550, 49916, 49962, 51962, 52330, 52331, 52332, 52883, Certificate 13398, 52884, 53384, 53385, 54339, 54340, 54341, 54510, 55616, 55617, and 56831 through 56839, inclusive, shall not exceed 10,660.42 acre-feet annually for mining and milling purposes.

The total diversion rate allowed under all permits associated with the dewatering program and all related mining and milling purposes shall not exceed 110 cfs.

A year-end report shall be submitted to the State Engineer no later than 45 days after the end of the calendar year as to how many wells have been drilled under this permit as well as how many wells have been abandoned. The exact location of each well drilled or abandoned shall also be supplied in this report, and illustrated on a supporting map.

Upon permanent cessation of all mining and milling purposes, and dewatering, all water granted under these permits shall revert back to the source from which it was appropriated except for any water requirements needed for any mine closure plan and/or to mitigate any adverse effects caused by dewatering.

The State Engineer retains the right to require at anytime the permittee to cooperate in funding of additional monitoring and modeling by an independent third party.

The State Engineer retains the right to impose future conditions as necessary upon review and evaluation of all data submitted reporting on the dewatering program, water use and the monitoring plan.

The permittee, on a quarterly basis, shall prepare and present an update on the activities of the mine and dewatering projects, and the Maggie Creek Basin Monitoring Plan, submitted September 10, 1992.

To protect existing rights and public interest, the State Engineer retains the right to regulate any or all pumping under the dewatering project and/or any other groundwater withdrawals herein authorized.
